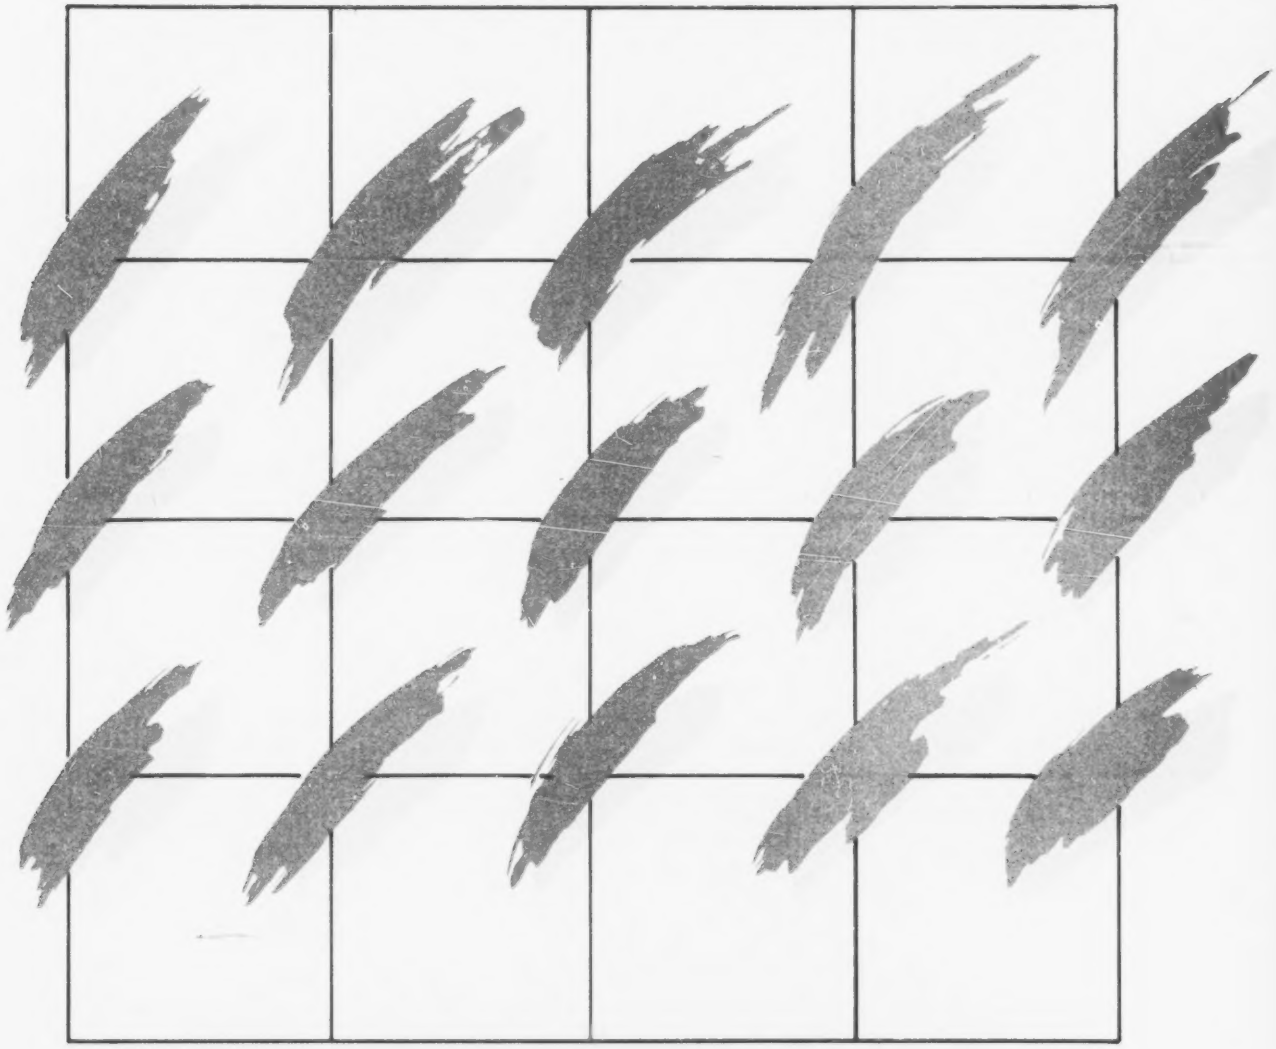
New Jersey ECONOMIC INDICATORS



THOMAS H. KEAN, Governor
State of New Jersey

CHARLES SERRAINO, Commissioner
New Jersey Department of Labor

AUGUST 1987

New Jersey ECONOMIC INDICATORS

Number 274 Based on data available through August 7, 1987

The Economic Situation in the Nation and the State..... 2

Comparisons of Economic Trends
New Jersey and the United States..... 6

Statistical Section..... S-1

New Jersey Economic Indicators is published monthly and distributed without charge, to those wishing to receive it, by the New Jersey Department of Labor, Division of Planning and Research, C N 056, Trenton, N.J. 08625-0056. It is prepared with the cooperation of other State and Federal agencies. Material appearing here may be reprinted without permission, but it would be appreciated if appropriate credit was given.

The Economic Situation in

The Nation

The national economy held to its moderately rising course during the second quarter and most business forecasters see more of the same for the period ahead. Gross national product (GNP) advanced at a 2.6% annual rate during the three months ending June 30, according to preliminary estimates of the U.S. Commerce Department, and average unemployment declined from 6.7% in the first quarter to 6.2% in the second (and 6.0% in July). Inflation was little changed, after accelerating earlier in the year mainly because of climbing world crude oil prices. Based on indexes used to remove the influence of price changes from the components of GNP, the inflation rate for the entire economy was 3.8% during the second quarter compared with 4.2% during the January-March period.

Consumer spending has been soft thus far in 1987, particularly for big ticket items like new cars and household appliances, and substantial weakness persists in the glutted markets for multi-family housing, office buildings and other types of nonresidential building in many parts of the country. Starts of new single family homes have also been heading downwards since early in the year, at least partially reflecting the effects of higher mortgage interest rates. Industrial activity has picked up, however, thanks to rising export demand and some recent improvement in orders for business equipment.

The majority of forecasters are counting on continued gains in international markets, moderately expanding consumer demand and a further rebound of investment in new equipment to keep the economy on an uptrend during the balance of 1987 and again in 1988. Homebuilding is expected to remain sluggish, especially for apartment units, and the slump in office, commercial and other nonresidential building construction is expected to continue. Most projections for this period call for overall growth rates within the 2½% to 3% range, with unemployment remaining about where it has been in recent months and prices rising at an annual rate of between 4% and 5%, in part because of mark-ups for imported goods.

The State

New Jersey business barometers for the second quarter suggest some easing of the strong expansionary forces that have generated nearly a half million jobs since the end of the 1981-82 recession and dropped the state's unemployment rate from close to the double-digit level to a 17-year low of 4% thus far in 1987. Indicators of future homebuilding turned down during the spring and, mirroring national trends, consumer spending has slowed somewhat from its extraordinary pace of the 1983-1986 period. Construction activity remained at a record level through June, however, and new jobs are still being created by the state's burgeoning service-producing industries, where employers have been finding their recruitment skills increasingly put to the test by intense competition for workers in the tightest labor market in recent memory.

Labor supply constraints have been particularly troublesome for restaurants, retail stores and other service industries accustomed to hiring students and other young persons during periods of peak demand. They had an easy time of it when large numbers of baby boomers were still entering the labor market, but this is no longer the case. With the number of young entrants now on the decline and the job market in general the tightest in many years, many employers are falling short of their seasonal recruitment targets. At least partly because of this, employment growth in the service sectors has moderated significantly since early spring.

According to the monthly employer survey conducted by the N.J. Department of Labor, total nonfarm wage and salary employment has actually plateaued in the state since March, after adjusting for normal seasonal changes. On a seasonally adjusted basis, there were approximately 3,566,700 workers on the payrolls of New Jersey nonfarm employers as of mid-June, a respectable increase of 95,000 from the same month last year. All of this gain had occurred by March, however, when jobholding totaled 3,568,100.

While employment gains have continued in the service sectors since March, they have been small and offset by a further erosion of factory jobs.

Employment in the state's service-producing industries advanced by about 10,000 from March to June to a record 2,175,600, with most of the new jobs contributed by business service establishments, financial institutions, insurance agencies, health care facilities and retail stores. This represents an increase of roughly 3,300 per month, about one-third the average monthly expansion of nearly 10,000 during the preceding seven months. The real underlying growth of labor demand in these industries has been and is likely to remain partially obscured by supply-related seasonal hiring shortfalls until after Labor Day. Service sector employment should move back onto a more steeply rising curve in September, when distortions caused by the reduced availability of seasonal workers have passed, though a continued tight labor market will probably prevent its growth from matching its performance over the past several years.

Hiring has leveled off in the construction industry since early spring, after allowing for normal seasonal increases. On a seasonally adjusted basis, construction employment stood at a record 167,000 in June, unchanged from March but up nearly 60,000 since the building boom began in the spring of 1983. Employment growth in this sector may have been held back in recent months by seasonal recruitment difficulties similar to those affecting service industries. It is also possible, however, that the state's extraordinary cyclical job expansion fueled by across-the-board increases in the demand for housing, office buildings, commercial facilities and infrastructure may be approaching its limit.

There is as yet no evidence within New Jersey of a prospective let-up of new nonresidential building construction, despite reports of increased vacancy rates for office and commercial structures. According to F.W. Dodge, contract awards for nonresidential building projects during the first six months of the year were up 23% from the same period in 1986. Similarly, awards for heavy engineering projects, such as roads and public utilities, were running 14% ahead of last year's pace. These gains compare with much more modest increases of 1% and 9%, respectively, at the national level.

Residential construction indicators have shown recent signs of weakness, however, with contract awards during the first half of 1987 down 19% from their very strong pace of a year earlier. Building permits statistics compiled by the N.J. Department of Labor (NJDOL) show a similar though less severe decline. The number of new dwelling units authorized for construction during the January-May period was off 7% from the same period in 1986 and when preliminary data for June are included the over-the-year decline comes to about 9%. All of the downturn occurred during the second quarter and it was concentrated in the single-family home segment of the industry, where higher mortgage interest rates may have been a contributing factor. While there has been no noticeable impact on employment to date, the downturns of these leading indicators could signal a slowdown in this segment of construction at some point in the future.

The long-awaited rebound of New Jersey's manufacturing sector remains elusive, with employment declining again in June for the fifth month in a row to a seasonally adjusted total of 682,100. Approximately 12,500 factory jobs have been lost since January, most of them in apparel, fabricated metal products, machinery, electrical equipment, instruments, primary metals and stone, clay and glass products. These losses more than offset gains recorded last fall and dropped factory employment to 121,600 below its pre-slump peak of 803,700 eight years ago.

Consumer spending in New Jersey continues to rise, but not as fast as during the big-ticket buying spree of the 1983 to 1986 period. The dollar volume of retail sales during the first five months of the year was up 4.6% from a year earlier, slightly better than a 4.0% increase for the nation as a whole. Gains have been mostly for nondurable goods. The dollar volume of consumer durable goods sales also shows a modest over-the-year increase, but nothing like in 1986 when auto dealers had their best performance on record, in part because of low-cost financing incentives that borrowed sales from 1987. Thus far in 1987 (through May), the number of new passenger cars registered by the N.J. Division of Motor Vehicles is running about 7% behind last year's pace.

Unemployment in the state averaged 4% of the civilian labor force during the first half of 1987 and held at this level in July, a full two percentage points below the national average. Of the 11 large industrial states for which estimates are available for July, only Massachusetts had a lower rate than New Jersey. Joblessness in the state has declined by approximately 53,000, or 1.2 percentage points, over the past year to an estimated 161,000, according to NJDOL estimates. Unemployment has not been lower in New Jersey since 1970.

The outlook is for little if any employment growth during the remainder of the summer because of seasonal labor supply shortages, followed by resumed expansion in the fall, primarily in service-producing industries. Nonresidential construction should remain sufficiently strong to offset any slowdown that might emerge in homebuilding and at least some pick-up of new orders and production still seems likely for the beleaguered manufacturing sector, which should benefit from increased export demand and reduced import competition because of the lower value of the dollar. With the state's labor force participation rate already at an all-time high and unemployment at or near its cyclical lowpoint, overall employment gains will be subject to labor supply constraints that will probably hold them to something on the order of 55,000 to 65,000 between now and the same time next summer.

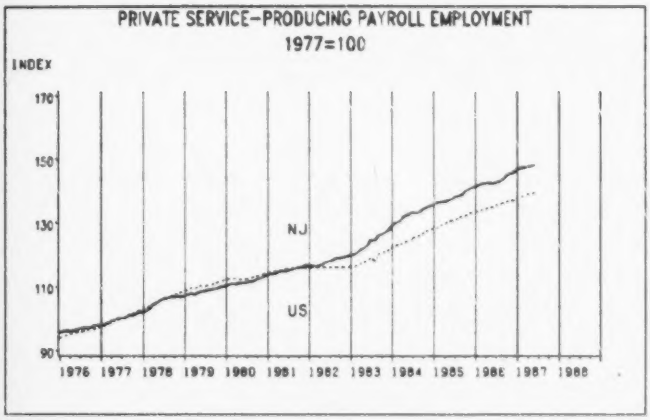
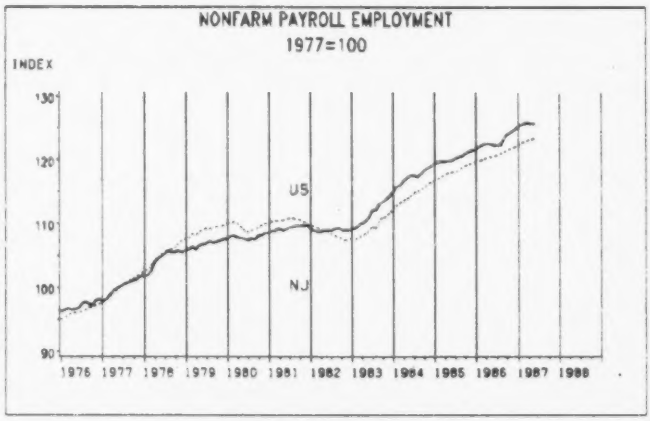
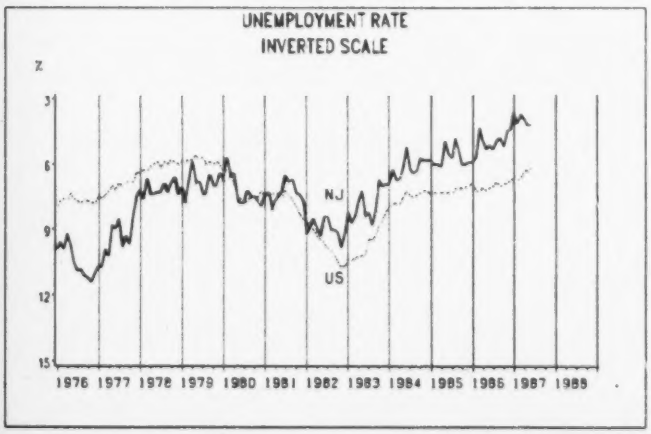
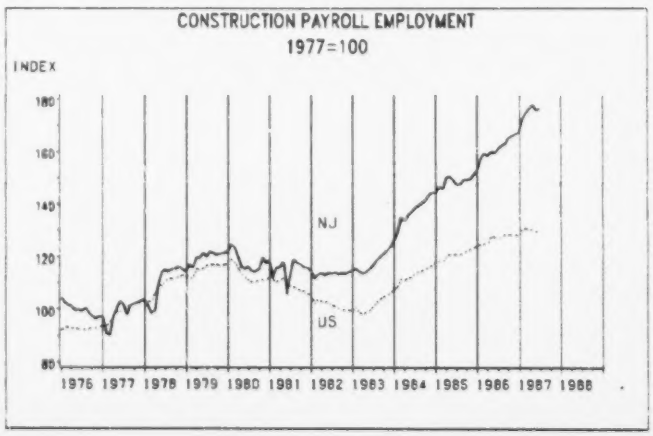
Comparisons of Economic Trends In New Jersey and the United States

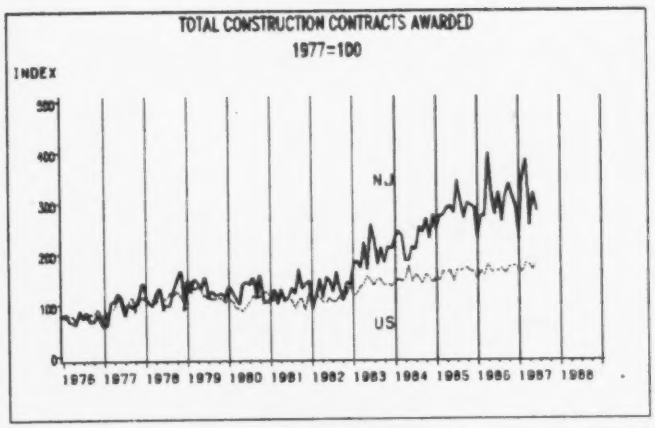


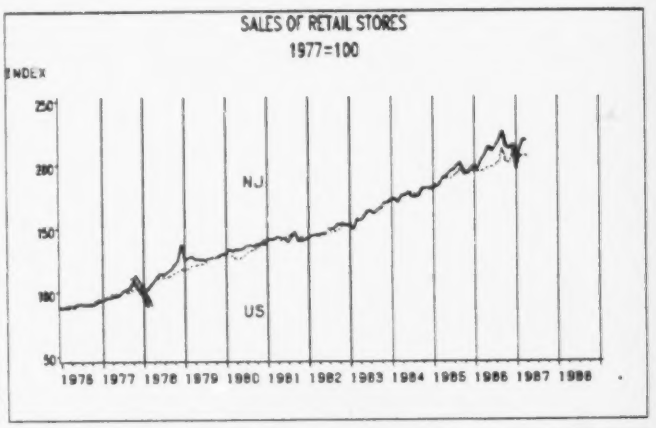


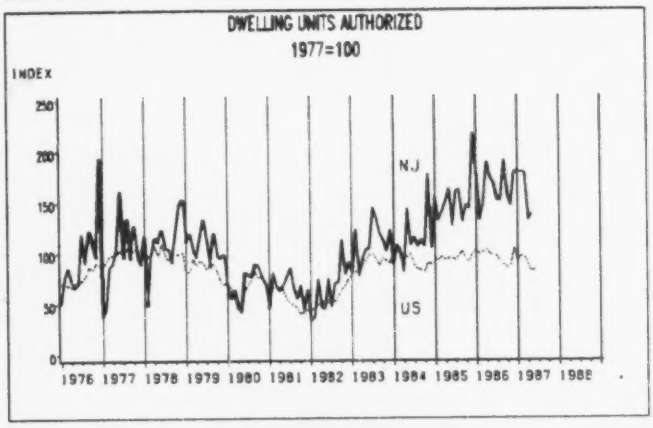


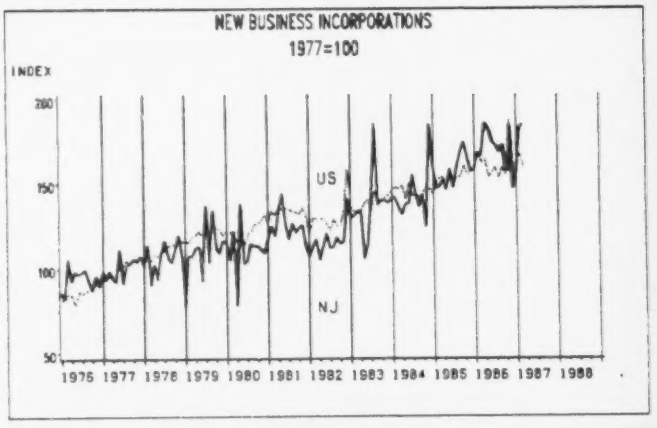


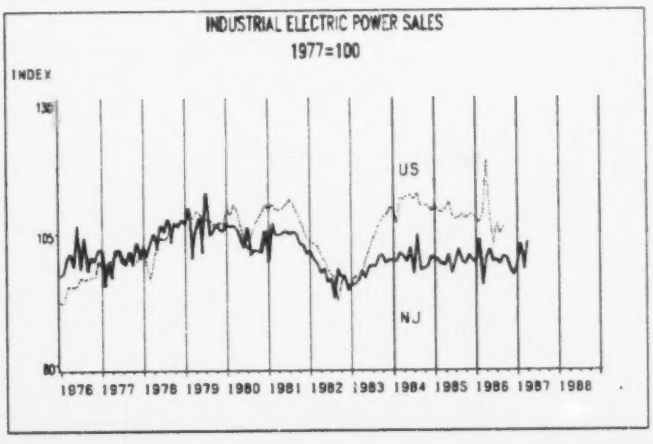
All data in the charts on these two pages have been seasonally adjusted and indexed to a 1977 base with one exception. Data on the unemployment rate is presented in actual units. The advantage of using an index is that it facilitates comparisons between the State and the Nation. The data for retail sales in New Jersey have been adjusted to take account of sample revisions that caused breaks in the series.

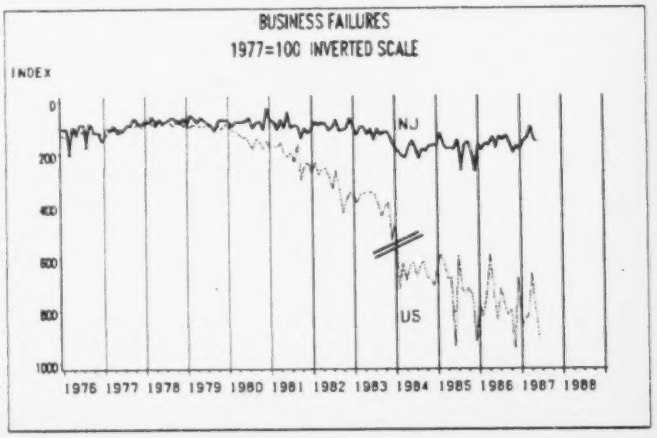












STATISTICAL SECTION

Please Note:

Each year the data series in *Economic Indicators* are revised using new benchmarks and seasonal adjustment factors. For this reason, it would be incorrect to generate an historic time series for *Economic Indicators* data by taking old issues of the *Economic Indicators* and tying the series together.

SEASONAL ADJUSTMENT OF DATA

All charts, except charts I and II and where otherwise noted, contain data seasonally adjusted by the X-11 variant of the U.S. Census Bureau program.

Data for 1975 and subsequent years in charts I and II have been seasonally adjusted using the ARIMA (Auto-Regressive Integrated Moving Average) method of seasonal adjustment developed by Statistics Canada.

For those series which are affected by the occurrence of five rather than four of a particular day of the week, during the course of a month in any given year, a statistical adjustment known as "trading day" has been made.

TABLE NOTES

Preliminary and revised data are indicated by a "p" or "r" after the entry.

CHART NOTES

Unless otherwise noted, all graphs were developed with seasonally adjusted data. Some series were plotted with the following variations noted on the graph itself:

Moving Averages. Series where the monthly data vary erratically have been plotted with moving averages and with nonaveraged data superimposed for the most recent years.

Ratio Scales. Where ratio scales were used to show constant rates of change as straight lines, this has been noted; otherwise, the graph is on an arithmetic scale.

Inverted Scales. For series where declines are associated with economic expansion (such as unemployment and business failures) an inverted scale has been used and noted.

Since the scale of each series is determined by the volume and trend of the data time series, caution should be exercised in making comparisons among charts.

MONTHLY AVERAGES

On page S-37 are the monthly averages of the series data for recent years to be used as a benchmark for evaluating current monthly data.

SHADED AREAS

Periods identified by the National Bureau of Economic Research (NBER) as ones of general national contraction have been shaded. They include the periods December 1969-November 1970, November 1973-March 1975, January 1980-July 1980 and July 1981-November 1982.

30	R.L. Polk and Company
31-36	NJ Department of Labor Division of Planning and Research

SERIES NOTES

1-6 The RESIDENT LABOR FORCE INDICATORS are estimated by two different methodologies. The **official series** is based on the U.S. Bureau of Labor Statistics (BLS) monthly survey of some 2,730 New Jersey households. The **unofficial series** is based on a combination

of unemployment insurance claims, employer survey data, estimating formulas, and household survey benchmarks.

Both data series are based upon population estimates and weights derived from the 1980 U.S. Census of Population.

Official series data have been adjusted to 1986 population estimates produced by the U.S. Bureau of the Census.

Unofficial series data have been adjusted to a 1986 benchmark.

The LABOR FORCE PARTICIPATION RATE and the EMPLOYMENT/POPULATION RATIO (Series 4 and 5) are expressed as percentages of the civilian noninstitutional population aged 16 years and over.

The New Jersey Department of Labor (NJDOL) agrees to publish the BLS approved estimates of labor force, employment, unemployment and unemployment rate for the State and all published areas, and agrees to label these data as the data used to allocate federal funds and determine eligibility for federal assistance programs. NJDOL reserves the right to publish alternate labor force and unemployment data for State purposes and will suitably label such data so as to distinguish them from the BLS approved series.

7-12 The ESTABLISHMENT EMPLOYMENT INDICATORS are generated from a monthly survey of employers on the number of persons who worked or received pay for any part of the pay period including the 12th of the month. The series are adjusted to March 1986 benchmarks and reflect the 1972 SIC (Standard Industrial Classification Manual) changes. See footnote on page S-29 for additional information in estimating state government employment.

PRIVATE SECTOR NONFARM PAYROLL EMPLOYMENT (Series 8) is computed by subtracting government employment from total nonfarm payroll employment.

SERVICE-PRODUCING INDUSTRIES PAYROLL EMPLOYMENT (Series 12) includes the industries of trade, services, finance/insurance/real estate, and transportation/communications/public utilities.

13 MANUFACTURING EMPLOYMENT - PRODUCTION WORKERS is developed from a monthly survey of employers on the number of nonsupervisory employees in the manufacturing sector who worked during or received pay for any part of the pay period including the 12th of the month. The series are adjusted to 1986 benchmarks and reflect the 1972 SIC changes.

14 MANUFACTURING WORKWEEK - PRODUCTION WORKERS is derived from a monthly survey of employment and earnings. The workweek is estimated by dividing AGGREGATE MANUFACTURING WEEKLY MANHOURS BY MANUFACTURING EMPLOYMENT - PRODUCTION WORKERS.

15 AGGREGATE MANUFACTURING WEEKLY MANHOURS - PRODUCTION WORKERS are estimated from a monthly survey of the manhours worked by manufacturing production workers.

16 WEEKLY EARNINGS OF MANUFACTURING PRODUCTION WORKERS are affected by premium pay, shift differentials, piecework and incentive payments, length of workweek, and other factors. Data are not seasonally adjusted.

17 The CONSUMER PRICE INDEX (CPI) measures the change in prices of a fixed market basket of goods and services purchased by urban workers. The index represents price changes for everything people buy for living--food, clothing, automobiles, homes, furnishings, fuel, drugs; fees to doctors, lawyers, and beauty shops; and rent, repair costs, transportation fares, public utility rates, etc. All taxes (sales, excise, real estate, etc.) directly associated with the purchase and continued ownership of an item are included in the price. Income and other personal taxes not associated with prices of specific goods are excluded.

The data series reproduced in the report are the **Urban Wage Earners and Clerical Workers** series (CPI-W).

CPI-W is based on urban consumer units where more than one-half of the income is earned from clerical or wage occupations. In addition, one of the members must work for 37 weeks or more in an eligible occupation. The CPI-W population represented 30 percent of the total United States population in 1981.

The U.S. CPI is the **U.S. City Average.**

The N.Y. CPI is for the **New York, N.Y.-Northeastern New Jersey** area which includes in New Jersey: Bergen, Essex, Hudson, Middlesex, Morris, Passaic, Somerset, and Union counties; and in New York: New York City, Nassau, Rockland, Suffolk, and Westchester counties.

The Phila. CPI is for the **Philadelphia, Pa.-New Jersey** area which includes in New Jersey: Burlington, Camden, and Gloucester counties; and in Pennsylvania Bucks, Chester, Delaware, Montgomery, and Philadelphia counties.

Questions on the use of the CPI should be addressed to the U.S. Bureau of Labor Statistics offices in New York City (212) 944-3121 or in Philadelphia (215) 596-1154.

THERE IS NO NEW JERSEY CONSUMER PRICE INDEX NOR COST-OF-LIVING INDEX.

18 NET SPENDABLE EARNINGS are calculated by adjusting gross average weekly earnings for the effects of state and federal taxes and inflation. Federal tax adjustments are made by the New Jersey Department of Labor according to a formula previously developed by the U.S. Department of Labor. Inflation adjustments are based on the average

Consumer Price Index for Urban Wage Earners and Clerical Workers in the New York-Northeastern New Jersey and the Philadelphia-New Jersey areas. The data are not seasonally adjusted.

20 Business failures data beginning with January 1984 are not comparable to those prior to that date due to coverage of industries not previously included. Beginning in January 1984, all industries are included in the data.

21 Beginning with the February 1987 issue of the **Economic Indicators**, data on total electric power sales have been replaced by industrial electric power sales. Industrial electric power sales are estimates of total sales of electricity by utilities to industrial users only. They are based on a sample of utilities surveyed by the U.S. Energy Information Administration, as reported in **Electric Power Monthly** (DOE/EIA-0226).

22-24 The CONSTRUCTION CONTRACTS INDICATORS are proprietary data provided by special permission of the F.W. Dodge Division, McGraw-Hill Information Systems Company.

The cumulative data presented in the table on page 3 are not the sum of the data contained in series 22, 23, and 24. The cumulative data contain retroactive revisions made after the monthly data were originally published. The monthly data have not been revised.

TOTAL CONSTRUCTION CONTRACTS AWARDED (Series 22) is the sum of seasonally adjusted residential and nonresidential construction contract awards and unadjusted nonbuilding construction contracts awards. The nonbuilding component does not exhibit a stable seasonal pattern.

25-27 The RESIDENTIAL BUILDING PERMITS INDICATORS are compiled as of the fifth day of the second following month and are not revised as subsequent reports are received. Since the reports from all New Jersey municipalities are never received by the cutoff date, preliminary figures are used for both the current and the historical series in order to ensure comparability. Final monthly data incorporating late reports appear in the annual summaries of **New Jersey Residential Building Permits,** published by the Division of Planning and Research.

TOTAL PRIVATE DWELLING UNITS AUTHORIZED by building permits (Series 25) data is the sum of seasonally adjusted single-family and two-family dwelling units and unadjusted three-or-four family and multi-family dwelling units. Public housing units are not included in either the New Jersey or U.S. series and represent a tiny fraction of the total.

DWELLING UNITS (5 OR MORE) AUTHORIZED BY BUILDING PERMITS (Series 27) include all multifamily structures with five or more units, except those in public housing. Data do not exhibit a stable seasonal pattern and are therefore not appropriate for seasonal adjustment.

28-29 The figures prior to 1970 for SALES OF RETAIL STORES were adjusted by the New Jersey Department of Labor to account for sample revisions introduced in 1968 by the U.S. Census Bureau.

SALES OF RETAIL STORES IN 1967 DOLLARS (Series 29) has been deflated by the "commodities only" component of the average New York-Northeastern New Jersey and Philadelphia-New Jersey **Consumer Price Index for All Urban Consumers.**

30 New passenger car registrations data are total new passenger cars registered in New Jersey, regardless of the State in which the sales occur, and include both domestically produced as well as imported vehicles.

Because of unemployment insurance coverage and other law changes affecting eligibility for benefits, data on unemployment insurance claims (Series 31-36) may not be directly comparable between years.

31 WEEKS CLAIMED (WEEKLY AVERAGE) is computed by dividing the total number of weeks claimed (intrastate and interstate agent under Regular UI program only) in the month by the number of weeks in the month.

The INSURED UNEMPLOYMENT RATE (IUR) is the seasonally adjusted weekly average of claimants (intrastate and interstate agent claims under the regular state program only) as a percent of the estimated covered employment.

32 The INITIAL CLAIMS WEEKLY AVERAGE represents intrastate and interstate agent claims under the regular state UI program only.

33 The UNEMPLOYMENT INSURANCE EXHAUSTIONS are from the regular state program only.

34-36 The industry INSURED UNEMPLOYMENT data are derived from a three percent sample of all claimants under the regular state unemployment insurance program. The data reflect the number of insured unemployed during the week generally containing the 12th of the month, although the data are a count of the claims filed during the subsequent week.

INSURED UNEMPLOYMENT IN SERVICE PRODUCING INDUSTRIES (Series 36) includes the industries of transportation/communications/public utilities, trade, finance/insurance/real estate, and services.

Data on insured unemployment in manufacturing and service-producing industries consist of the sum of the seasonally adjusted or unadjusted data for the respective industry components. The decision to seasonally adjust the component industries is based upon individual consideration of the industries and whether seasonal adjustment is statistically meaningful.

* THE TOTAL NUMBER OF STATE EMPLOYEES REPORTED UNDER THIS HEADING IS DETERMINED ON THE BASIS OF A DEFINITION DEVELOPED BY THE U.S. BUREAU OF LABOR STATISTICS WHICH IS STANDARDIZED THROUGHOUT THE NATION. THE DEFINITION INCLUDES BOTH FULL- AND PART-TIME WORKERS IN THE EXECUTIVE DEPARTMENTS, THE LEGISLATURE, AND THE JUDICIARY, AS WELL AS ALL EMPLOYEES OF AUTHORITIES, COMMISSIONS, THE STATE UNIVERSITY AND OTHER AGENCIES NOT INCLUDED ON THE CENTRAL STATE PAYROLL

** THIS SUB-CATEGORY OF STATE GOVERNMENT EMPLOYMENT IS LIMITED TO FULL-TIME EMPLOYEES OF THE EXECUTIVE DEPARTMENTS, THE LEGISLATURE, AND THE JUDICIARY. THE FIGURES ARE BASED ON THE CENTRAL STATE PAYROLL AND ARE PROVIDED BY THE DEPARTMENT OF TREASURY.

NEW JERSEY'S NONFARM PAYROLL WORKERS BY MAJOR INDUSTRIES, 1958-1986

* Data from 1972 forward are not precisely comparable with earlier figures because of SIC revisions. The revisions caused noticeable changes between the original and revised 1972 averages such as lumber (+700), furniture (-500), rubber (+2,000), and instruments (+3,000).

AVERAGE WEEKLY GROSS DOLLAR EARNINGS OF PRODUCTION WORKERS IN NEW JERSEY

Data Notes

Standard errors can be used to construct confidence intervals around each sample estimate. A 90% confidence interval means that, if repeated samples were drawn from the same population, the interval of plus or minus 1.645 standard error around each sample estimate would contain, in 9 out of 10 cases, the true value based on a complete census of the population.

The standard errors and coefficients of variation are developed on the basis of past observed variation in New Jersey's sample data. They cannot be applied to seasonally adjusted data because a source of variation, namely seasonal patterns, have already been eliminated by the seasonal adjustment procedure.

Standard errors (S.E.) and coefficient of variation (C.V.) for all years are based on 1985 CPS sample parameters.
